Go to bed 15 minutes earlier each night
5 days leading up to the time change.

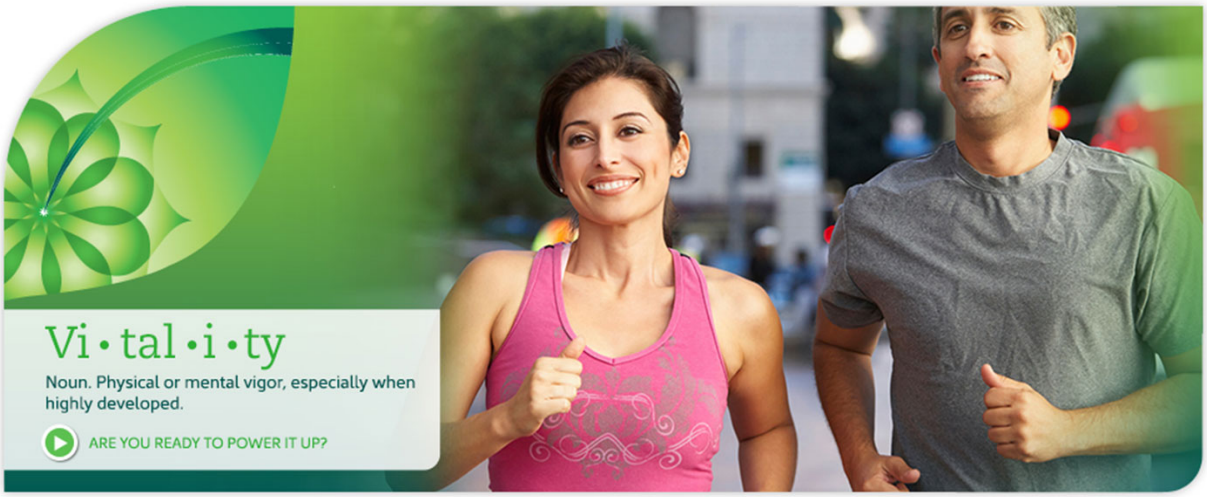

Know More Now! This information will help your physician determine your baby's sex early in your pregnancy.
One of the 23 pairs of human chromosomes, labeled either XX or XY, are referred to as the sex chromosomes because they determine your sex at birth. Women have two X chromosomes, and men have one X and one Y. The mother contributes one chromosome (X) to the baby's DNA and the father contributes one of his, either an X or a Y. A new genetic test can differentiate between male and female sex chromosomes of your baby during the first trimester of pregnancy.
XX
XY
