Improve your patients' **CARDIAC HEALTH OUTCOMES**

Movn Virtual Cardiac Rehab
Movn Health (Movn) provides the most widely deployed and clinically validated virtual cardiac rehab and prevention program available.

Movn manages member care from referral through delivery of care. We help members manage risk factors, such as exercise, nutrition, stress, smoking, blood pressure and cholesterol, using:

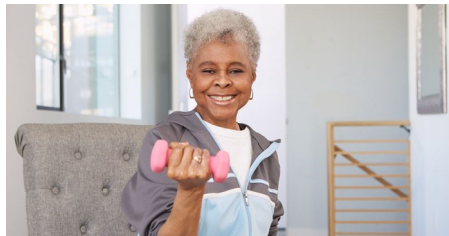

- Evidence-based guidelines
- Behavioral science
- Remote monitoring
- Personalized coaching

Movn helps members recover after a cardiac event, such as myocardial infarction, coronary artery bypass graft, stent, or stable heart failure.

- 3.5M** US adults are eligible for postacute cardiac rehab each year
- 90%** Of those eligible do not complete cardiac rehab due to access barriers
- 40%** Readmission rate without cardiac rehab, 12-month average
- \$35K** Average cost of hospital readmission
- CRE** Cardiac rehab participation is now a HEDIS measure
